

## Following Lap Band

### Following Lap Band

Undergoing the lap band procedure, patients typically witness a gradual weight reduction that permits the skin to stay more elastic so there is often decreased drooping, stretching and skin damage as opposed to that with rapid weight loss.

Another reason why people Choose Lap Band is that the band placed in the stomach area is adjustable; a procedure that can be easily handled with a few visits to one's doctor's office.

Likewise, saline can be taken out if the individual needs to consume additional nourishment particularly during pregnancy or for other surgeries.
